About Corn

Corn (Maize) is a versatile cereal crop used for food, feed, and fuel.

Growing Conditions

Soil Type:

Well-drained fertile loam soil, pH 5.5-7.0

Climate:

Warm weather crop, temperature 21-27°C

Water Requirement:

Moderate to high - 500-800mm during season

Sowing Time:

June-July (Kharif) or February-March (Rabi)

Harvest Time:

80-110 days after sowing

Farming Tips & Best Practices

1. Use quality hybrid seeds (20-25 kg/hectare)
2. Sow at 60x20 cm spacing
3. Apply basal dose of fertilizers before sowing
4. Provide top dressing at knee-high stage
5. Irrigate at critical stages: tasseling and grain filling
6. Control fall armyworm and stem borers
7. Harvest when grain moisture is 20-25%
8. Dry properly before storage
